# QA Automation Engineer

Testing & Quality Control

## DESCRIPTION

How often do you get the chance to make a permanent and visible global impact? Reconstruct is used to build new stadiums, hotels, dams, hospitals, and many other buildings, as well as inspect bridges, power plants, and other critical infrastructure. Our customers say we are the future of construction. Using your talents as a QA Automation Engineer with the team at Reconstruct, you'll be able to point to many impressive structures and say, "I helped build that."

## RESPONSIBILITIES

1. The majority of your day will be developing automated tests for integration and regression.
2. Work closely with other engineers and product managers to design a test suite that ensures a quality experience for the user. Your contributions will help us scale and evolve our platform.
3. Participate in product review, and identify edge cases.
4. Do your best work with us. Reconstruct welcomes diversity and expects you to question, learn, and grow.

## QUALIFICATIONS

- Extensive experience developing automated test suites for front-end and APIs using tools such as Selenium Grid, Robot Framework, or alternatives
- Demonstrated expertise in automated testing; ability to provide solid QA guidance and insight
- Ability to communicate with audiences of different technical backgrounds, and collaborate across multiple teams
