Senior Software Engineer

Frontend & Client-side

DESCRIPTION

How often do you get the chance to make a permanent and visible global impact? Reconstruct is used to build new stadiums, hotels, dams, hospitals, and many other buildings, as well as inspect bridges, power plants, and other critical infrastructure. Our customers say we are the future of construction. Using your talents as a Senior Software Engineer with the team at Reconstruct, you'll be able to point to many impressive structures and say, "I helped build that."

RESPONSIBILITIES

1. The majority of your day will be programming new features, writing tests, and working on sprint tasks. Help implement our best-in-class software tools.
2. Work closely with other engineers and product managers to design a software solution that delivers optimal value to the user. Your architecture contributions will help us scale and evolve our platform.
3. Mentor mid-level and junior engineers in the art of software engineering, conduct code reviews, and help bring on new members as we grow.
4. Do your best work with us. Reconstruct welcomes diversity and expects you to question, learn, and grow.

QUALIFICATIONS

- 5+ years in a frontend software engineering role
- Extensive experience with JavaScript, Vue.js, CSS, Docker, and performance optimization
- Demonstrated expertise in frontend software engineering; ability to provide solid architectural guidance and insight
- Ability to mentor junior developers and contribute constructive code review, communicate with audiences of different technical backgrounds, and collaborate across multiple teams
