

# Software Engineer

Full Stack (Remote)

## DESCRIPTION

How often do you get the chance to make a permanent and visible global impact? Reconstruct is used to build new stadiums, hotels, dams, hospitals, and many other buildings, as well as inspect bridges, power plants, and other critical infrastructure. Our customers say we are the future of construction. Using your talents as a Software Engineer with the team at Reconstruct, you'll be able to point to many impressive structures and say, "I helped build that."

## RESPONSIBILITIES

1. The majority of your day will be programming new features, writing tests, and working on sprint tasks. Help implement our best-in-class software tools.
2. Work closely with other engineers and product managers to design a software solution that delivers optimal value to the user.
3. Participate in code reviews, and help bring on new members as we grow.
4. Do your best work with us. Reconstruct welcomes diversity and expects you to question, learn, and grow.

## QUALIFICATIONS

- Knowledge of ES6 JavaScript, Node.js, React or Vue.js, CSS, Docker
- Ability to communicate with audiences of different technical backgrounds, and collaborate across multiple teams
- An interest in creating software for web applications, and a strong desire to develop a high performing, high quality product
